

Your AI agents working in Orgvue

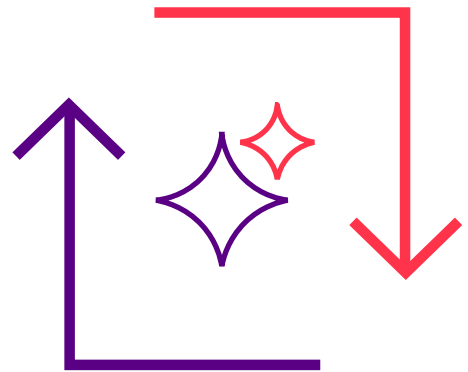

Speed up organizational design, model change, and surface impact while keeping decisions grounded in your methodology, governance, and human control.

AI is changing what's possible in workforce transformation

Teams can analyze workforce data faster, surface patterns sooner, explore more questions, and test more options than would be possible through manual effort alone.

But faster analysis is not the same as reliable organizational decision-making at scale. Without clear governance, explicit assumptions, and consistent application of methodology, results can vary, become difficult to reproduce, and be harder to defend.

The point of analyzing the organization is to change it. That requires rigor, human oversight, and accountability throughout the process.

Bringing Orgvue into your AI workflow

Orgvue's MCP connects your trusted AI agent directly to Orgvue Workspace.

Think of it as giving your AI agent of choice a key to Orgvue, with Orgvue remaining the governed, secure, auditable system for workforce decisions, and the human staying in control of what gets reviewed, validated, and saved.

Ask your agent to access organizational data, model restructuring scenarios, and surface the impact of changes, all in natural language, in your existing environment.

The agent does the heavy lifting. You make the decisions.

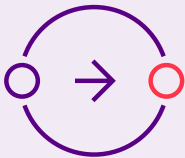

AI brings speed. Orgvue brings trust.

AI can help find patterns faster, but the harder part is moving from pattern to decision. Orgvue helps bridge that gap by connecting insight to design within a governed, repeatable framework.

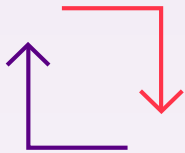

Governed from the start

Access, scope, and assumptions are controlled. A governed data dictionary means models interpret the organization's hierarchy correctly.

Consistent outputs

The same question produces the same answer, grounded in explicit rules and definitions.

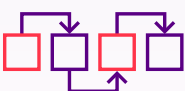

Repeatable analysis

Results can be reproduced and scaled beyond a single interaction.

Defensible design and decisions

Outputs are tied to a clear, auditable decision record, giving leaders a defensible answer when they ask, "Why this?"

Connected to execution

Analysis flows directly into planning and change, rather than stopping at insight.

What it looks like in practice

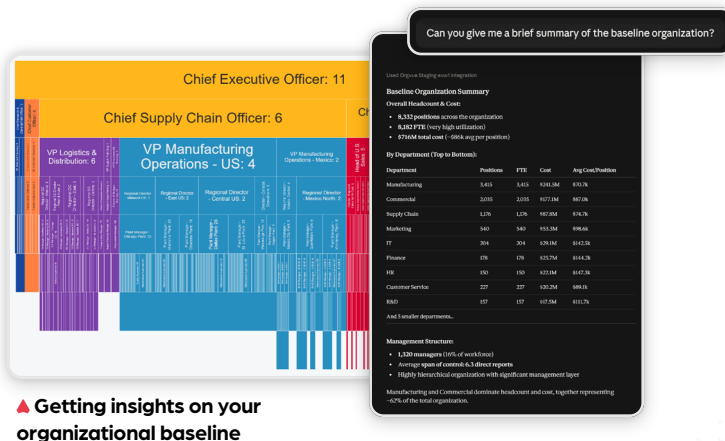

Ask your agent to run organizational analysis, model restructuring scenarios, and see the impact, all through natural language in the Orgvue environment where you already work.

Ask questions about your organization

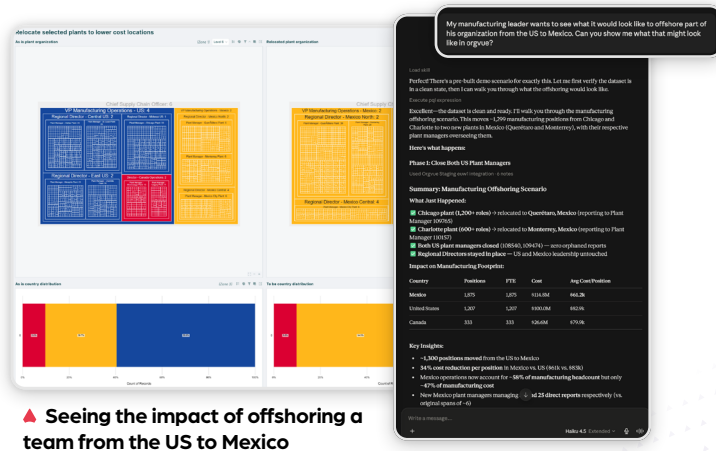

Need to understand the impact of moving a team from one function to another?

Want to see how a restructure affects span of control across a business unit?

Ask your agent. It accesses the data in Orgvue and surfaces the results for you to explore.

Model organizational change

Move beyond analyzing the current organization.

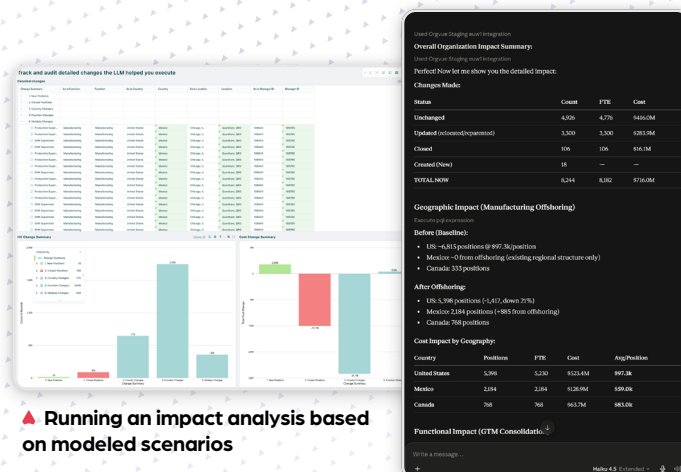

Ask the agent to model restructuring scenarios and show the impact of potential changes.

Review and decide in Orgvue

Results are surfaced inside Orgvue Workspace for review and sign-off.

Nothing updates your organizational data without a human reviewing and saving the change.

You stay in control of what gets actioned.

Faster, scalable organizational design

Speed to analytics, insights, and design

Ask your AI agent about your organization and get a detailed, data-backed answer straight away. Move beyond insight into actionable, auditable design decisions.

Your methodology, embedded

Your AI agent is configured to work the way you work. Combine workforce data with your organization-specific context, including design principles, governance rules, and span and layer targets.

Amplifying humans through AI

AI handles the heavy lifting within a structured, governed approach, helping your teams move faster and do more while keeping humans in control.

Humans control what lands

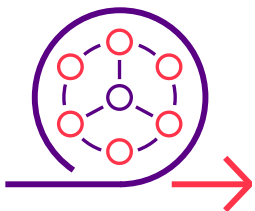

The agent can surface analysis and model changes, but nothing updates your organizational data without a human reviewing and saving it in Orgvue Workspace. Data changes are auditable and reversible, ensuring confirmed decisions are traceable, governed, and defensible.

Stay in your flow

Analyze, model, and plan your organization through your AI agent without switching between platforms. Access remains governed exactly as if you were working directly in Orgvue.

Built around the way you work

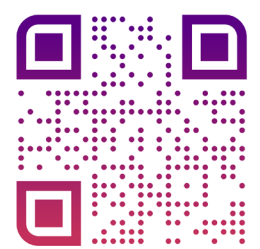

The setup is co-built with Orgvue's partners or Professional Services team around your workflows, rules, and methodology.

As new capabilities are released, your setup evolves with them. The configuration you have invested in carries forward, adding to what your agent can do without undoing what is already working.

Orgvue is an organizational design and planning platform that empowers your business to transform its workforce by understanding the work people do and the skills they have. Our platform connects strategy to structure, providing clarity of vision, so you can build a more adaptable, better performing organization that thrives in a constantly changing world of work.

The world's largest and best-known enterprises and consulting firms use Orgvue to visualize and model current and future states of the organization and make faster, more informed decisions. The company is headquartered in London, with offices in Philadelphia, The Hague, Toronto, and Sydney.
