AI doesn’t have to be about cost reduction through worker displacement. In fact, today’s most successful enterprise adopters are using AI for growth initiatives or extending business capability.

Generative AI tools can accelerate skills development and upskill workers quickly. For example, Accenture is using generative AI to scale a skills training platform. This helps organizations find the right talent for the job, while providing ongoing support and skills development to those who are upskilling.

Natural language knowledge work increasingly takes up 15% of total work time.

Whilst organizations seek to increase the number of tasks completed by 10%, that could create 40% more tasks for other workers to complete, and up to $660 billion in industry, and up to $340 billion annually to the banking industry.

The risks and challenges

- Data accuracy (56%)
- Inaccuracy (56%)

ChatGPT has over 180 million users and more than 1 billion monthly visits on its website.

How OrgVue can help

Organizations leverage AI to rapidly migrate from disparate, siloed systems to a single, centralized portfolio of workforce information that provides an actionable view of their entire workforce and the entire talent landscape.

- Align workforce strategy, business plans, and talent needs
- Understand current and future talent needs of the organization
- Use AI-driven scenarios to continuously plan and re-plan for workforce needs
- Monitor talent needs and costs over time
- Plan, execute, and measure workforce and people strategies

This could add up to $440 billion annually to the banking industry, and up to $660 billion in industry, and up to $340 billion annually to the banking industry.

Case study: Consultants outperform their counterparts by using AI

When using making lacks reflection of the typical work of an on-site consulting, facility, research found that those armed with AI tools such as ChatGPT or OrgVue were more productive in terms of quality, quantity, and speed. 75% of the value that generative AI can soon deliver will cross service lines.

Customer operations

- Increases in the risk and challenging

In a recent survey, 91% of organizational leaders agreed that AI would be important for their organizations in the next 5-10 years.
